“Implementing a Successful Electronic Medical Record” Free Access to EMR Webinar offered by Inteck, Inc.

DENVER, COLORADO, July 27, 2006. Inteck, an information technology (IT) consulting firm for the healthcare industry, is now offering a complimentary pre-recorded EMR overview webinar.

Peter Caplan, Director of Inteck’s EMR Program states “most hospitals without an EMR already in place are in one of two situations 1) they recognize the need for EMR and have a willingness to move forward or 2) they have not yet made a commitment to implementing an EMR, but would like to learn more about how to proceed.” Healthcare organizations have many misconceptions of what an EMR is and what it should do. The first step should be education and awareness building of everyone in the healthcare organization, from board members to the clinical staff. Inteck has developed and conducted a webinar for a select group of hospitals. Based on the response, Inteck is now offering this pre-recorded EMR overview to all hospitals.

Inteck has also developed a comprehensive program to help insure that hospitals proceed through the EMR process effectively. Their program is centered around educating all levels of the organization into the process for ultimate buy-in and success.

Inteck’s program consists of five phases:

1. Educate & build awareness of the EMR program and processes at all levels of the organization
2. Develop a Strategic EMR Plan including the budget required and workflow process redesign
3. Implement the Plan including workflow process redesign, integration (interoperability) of existing systems & perform technical testing
4. Perform Operational Readiness Testing (ORT) & Implementation of the EMR
5. Train and educate the staff on the EMR process and use of the EMR technical tools

With the increasing emphasis on hospitals implementing an EMR, Inteck has developed a program to provide the education and technical expertise, which will result in a successful implementation. Unlike other computerization projects, implementation of an EMR is more complicated because it requires the involvement of everyone associated with the hospital (including board members) and affects the workflow processes of all caregivers. Also, since most hospitals have software applications from multiple vendors, it requires interoperability between these systems to provide caregivers with all of the patient information required to administer care.

To learn more about EMR please contact Info@Inteck-Inc.com or to view the pre-recorded webinar complete the form at www.Inteck-Inc.com/EMRwebinar.htm and you will be directed to the webinar.

About Inteck, Inc.

Since 1982, Inteck has provided IT consulting services to the healthcare industry. Inteck specializes in aligning an organization’s IT plan with its vision and business plan. Inteck provides services in the area of optimization and enhancement of existing systems; strategic and tactical IT planning; system implementation; assessment and evaluation; and facility management and outsourcing. Inteck also provides a complete set of services that support most hospital information system vendors. With staff located nationwide, Inteck employs healthcare information specialists, clinicians, chief information officers and healthcare professionals.
